i **Product status:** regular delivery

The CX7050 Embedded PC has an Arm® Cortex®-M7 single-core processor with 480 MHz. In the basic configuration, the CX7050 has a slot for a microSD card and an Ethernet interface. As a special feature, the CX7000 series has eight integrated multi-functional inputs as well as four integrated multi-functional outputs.

The CANopen commander (master) interface of the CX7050 can also be used as a CAN or CANopen slave.

E-bus or K-bus terminals can be attached as required; the CX7050 automatically recognizes the type of I/O system connected during the start-up phase. The control system is programmed with TwinCAT 3 via the Ethernet interface.
